

INTRODUCING NEW UNIFINE PENTIPS

Unifine Pentips now have unique added features. The tip of the needle is triple sharpened to allow optimal injection giving greater comfort than ever before. Anti-coring treatment sharpens the point at the rear of the needle to ensure clean piercing of the insulin cartridge septum with no fragmentation. They fit quickly and easily to virtually all insulin delivery pens. Available in depths of 6 mm, 8 mm and 12 mm, Unifine Pentips are available today on the NDSS and through Diabetes Australia.
